*Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-15, 27-29, 31 and 34, drawn to an isolated nucleic acid comprising the SBMu200 gene, plant cells and plants transformed with the nucleic acid, a method of using it to impact fertility of a plant, and expression vectors comprising it, classified in class 800, subclass 290, for example.
  - II. Claims 19-22, 30 and 32-33, drawn to a method of producing hybrid seed, a plant thereby obtained and an expression vector used in the method, classified in class 800, subclass 274, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are independent and distinct. The different methods have different starting materials, different method steps, and different end products. The plants of invention II comprise different nucleic acids than do the plants of invention I.

2. Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq (see MPEP 803.04 and 2434).

Upon election of a Group, Applicant is additionally required to select a single nucleotide sequence and corresponding amino acid sequence for said Group. This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid

Art Unit: 1638

sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fields of search, and classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

#### *Sequence Rules*

4. This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825.

The claims are drawn to nucleic acids encoding SEQ ID NO:8; however, there is no SEQ ID NO:8 in the sequence listing.

Full compliance with the sequence rules is required in response to this Office action. A complete response to this Office action must include both compliance with the sequence rules

Art Unit: 1638

and a response to the issues set forth above. Failure to fully comply with both of these requirements in the time period set for in this Office action will be held to be non-responsive.
